The Rejections

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

Claims 1 to 5, 10 to 13, and 16 to 19 are rejected under 35 U.S.C. 102(a and e) as being clearly anticipated by Makita et al (5,851,860).

The Makita et al reference teaches a method of crystallizing amorphous silicon. A noble metal, nickel, copper is plasma deposited onto the amorphous silicon. There can be more deposition of the silicon and barrier layers present. The entire structure is then heated above 300°C to crystallize the silicon, note col. 23 lines 18-42.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1765

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 7 to 9, 14, 15, 22 and 24 to 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Makita et al.

The Makita et al reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the type plasma, process parameters and apparatus setup. However, in the absence of unobvious results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable plasma type, process parameters and setup in the Makita et al reference in order to increase the control of the metal deposition so that only the desired amount is deposition onto the silicon.

Response to Applicants Arguments

Applicant's arguments filed September 30, 2002 have been fully considered but they are not persuasive.

Art Unit: 1765

Applicants' argument concerning the Makita et al reference is noted. However, the Makita et al reference does in fact teach the deposition of the catalyst onto the amorphous silicon layer as instantly claimed. The resultant structure is then heated so as to crystallize the silicon, note citation in the rejections. Also, the fact that applicant has a different reasoning for doing what is suggested in the prior art is not demonstrative of unobviousness, In re Kronig 190 USPQ 425.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
